Time: $2^{1 ⁄ 2}$ Hours]
[Max. Marks: 70

## Instructions to the candidetes:

1) Answer Q. 1 or Q.2, Q. 3 or Q.4, Q. 5 or Q. 6 Q. 7 or Q.8.
2) Figures to the right indicate full marks.
3) Neat diagrams must be drawn whenever necessary.
4) Make suitable assumption whenever necessary.

Q1) a) The first four moments of a distribution about the value 5 are 2,20,40 and 50. From the given information obtain the firstifour central moments, coeefficient of skewness and kurtosis.
b) Oobtain the regression lines $y$ on $x$ and on for the data.

| $x$ | 5 | 1 | 10 | 3 | 9 |
| :--- | :--- | :---: | :---: | ---: | ---: |
| $y$ | 10 | 11 | 5 | 10 | 5 |

c) Calculate standard deviatron forthé following frequency distribution. Decide whether Arithmetio mean is good or not.

| Wages in rupees <br> earned per day | $0-10$ | $10-20$ | $20-30$ | $30-40$ | $40-50$ | $50-60$ |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of laborer's | 5 | 9 | 15 | 12 | 10 | 30 |

OR
Q2) a) Following are the values of import of raw materiakand export of finished product in suitable units.

| Export | 10 | 11 | 14 | 14 | 20 | 22 | 16 | 12 | 15 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 13 |  |  |  |  |  |  |  |  |  |
| Import | 12 | 14 | 15 | 16 | 21 | 26 | 21 | 15 | 16 |

Calculate the coefficient of Correlation betweenthe import values and export values.
b) If the two lines of regression are $9 x+y+\lambda=0$ and $4 x+y=\mu$ and the means of $x$ and $y$ are 2 and -3 respectively, find the values of $\lambda, \mu$ and the coefficient of correlation between $y$ and $y$.
c) Compute the first four moments about arbitrary mean $\mathrm{A}=25$ for the following frequencies.

| No of Jobs | $0-10$ | $10-20$ | $20-30$ | $30-40$ | $40-50$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| No of Workers | 6 | $26 \wedge$ | 47 | 15 | 6 |

Q3) a) $20 \%$ of bolts produced by a machine are defective. Determine the probability thatout of 4 bolts chosen at a random.
i) 1 is defective
ii) Zêroare defective
iii) At most 2 bolts are defective
b) The average number of misprints per page of a book1.5. Assuming the distribution of number of misprints to be Poisson, 还ind
i) The Probability that a particular book is free from misprints.
iii) Number of pages containing more than misprint if the book contains 900 pages.
c) For a normal distribution Whenmean $=2$, standard deviation $\sigma=4$, find the probabilities of the following intervals.
i) $4.43 \leq x \leq 7.29$
ii) $-0.43 \leq x \leq 5.39$
[Given : $\mathrm{A}(\mathrm{z}=0.61)=0.229 \beta, \mathrm{~A}(\mathrm{z}=1.32)=0.4066, \mathrm{~A}(\mathrm{z}=0.85)=0.30231$

## OR

Q4) a) A Random variable with following probability distribution.

| X | 0 | 1 | 2 | 3 | 4 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{P}(\mathrm{X})$ | 0.1 | $k$ | $2 k$ | $2 k$ | $k$ |

## Find

i) $k$
ii) $\mathrm{P}(x<2)$
iii) $\mathrm{P}(x \geq 3)$
iv) $\mathrm{P}(1 \leq x \leq 3)$
b) Fit a Poisson Distribution to the following data and calculate theoretical frequencies

| $x$ | 0 | 1 | 2 | 3 | 4 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $f$ | 109 | 65 | 22 | 3 | 1 |

c) The lifetime of an article has a normal distribution with mean 400 hours and standard devigtion 50 hours. Find the expected number of articles out of 2000 whose lifetime lies between 335 hours to 465 hours. (Given : $A(z=1.3)=0.4032$ )

Q5) a) The Table below gives the number of customers visit the certain company on various days of week

| Days $\hat{\imath}$ | Sun | Mon | Tue | Wed | Thurs | Fir | Sat |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Number of Customers | 6 | 4 | 9 | 7 | 8 | 10 | 12 |

Testat $5 \%$ of level of significance whether customer visits are uniformaly điștributed over the days.
$\left.\chi_{\text {[Given }} \chi_{6,0.05}^{2}=15.592\right]$
b) In a Batch of 500 articles, produced byya machine, 16 articles are found defective. After overhauling the machine, it is found that 3 articles are defective in a batch of 100 Has the machine improved?
(Given $\mathrm{Z}_{\alpha}=1.96$ )
c) Samples of Size 10 and 14 were taken from two normal populations with Standard deviation 3.5 and.5.2. The sample means were found to be 20.5 and 18.6. Test whetherthe means of the two populations are at the same level.
(Given $t_{0.05,22}=2.077$ )
OR
Q6) a) In an experiment on pea breeding, the following frequencies of seeds were obtained.

| Round and <br> Green | Wrinkled and <br> Green | Round and <br> Yellow | Wrinkled <br> andeallow | Total |
| :---: | :---: | :---: | :---: | :---: |
| 222 | 120 | 32 | 0 | 150 |

Theory Predicts that the frequencies should be in Proportion 8:2:2:1.
Examine the correspondence between thegry and experiment
[Given $\chi_{3,0.05}^{2}=7.815$ ]
b) For sample I : $n_{1}=1000, \Sigma x=49000, \Sigma(x-\bar{x})^{2}=7,84,000$, For Sample II : $n_{2}=1500, \Sigma x=70500, \Sigma(x-\bar{x})^{2}=24,00,000$.

Discuss the significant differebee between mean score.
(Given $\mathrm{Z}_{\alpha}=1.96$ )
c) Find the $F$ statistics fronit the following data:

| Sample Size (ń) | Total observation $\Sigma x$ | Sum of squares of observations $\Sigma x^{2}$ |
| :---: | :---: | :---: |
| $10) 8$ | 9.6 | $61.52$ |
|  | 16.5 | $\text { ov } 73.26$ |

Q7) a) bet $P$ be the probability that a coin will fall heạdin a single toss in order to test $H_{0}: P=\frac{1}{2}$ against $P=\frac{3}{4}$. Thecoin istossed 5 times and $H_{0}$ is rejected if more than 3 heads are obtained. Find the probability of type I error and power of the test.
b) Show that the likelihood ratio test for testing the equality of variances of two normal distribution is the usual F-test.

## OR

Q8) a) Write short notes on
i) Most Powerfulitest
ii) Level of significance
iii) Advantages and disadvantages of non-parametric test
b) State and Prove Neyman - Pearson lemma for testing asimple hypothesis against a simple alternative hypothesis.
