T.E. (Mechanical/Automobile) COMPOSITE MATERIALS

(2019 Pattern) (Semester - II) (302052-A) (Elective - II)

Time : 2¹/₂ Hours]

[Max. Marks : 70

Instructions to the canaidates:

- 1) Answer Q. 1 or Q. 2. Q.3 or Q. 4, Q.5 or Q. 6, Q. 7 or Q. 8.
- 2) Figures to the right indicate full marks.
- 3) Use of a calculator is allowed.
- 4) Assume suitable data. if necessary.

Q1) a) Describe the *in-situ* process of fabrication of a metal matrix composite. [6]

- b) Explain interfaces and wettability of a metal matrix composite. [6]
- c) List three kinds of metal matrix composites and write typical reinforcements used in particle type metal matrix composites. [6]

Q2) a) Explain with neat sketch the stir-casting process of fabrication of a metal matrix composite in detail. [6]

- b) Describe liquid infiltration process with a neat sketch.
- c) Give the names of important metallic matrices used as matrix materials and the broad categorization of processes for fabricating metal matrix composites. [6]
- Q3) a) Derive an expression for longitudinal and transverse Young's modulus and in plane shear modulus of unidirectional composite using mechanics of material approach.
 - b) Write a short note on
 - i) Unidirectional continuous fiber
 - ii) Discontinuous fiber
 - iii) Woven reinforcements.
 - c) Calculate longitudinal and transverse Young's modulus of the composite with 30% fibers by volume. Elastic moduli of glass fibers. And epoxy resin are 70 and 3.5 GPa. respectively.

[6]

[6]

- Q4) a) Derive an expression for volume and weight fraction of composite. [6]
 - b) Explain five ultimate strength parameters of unidirectional lamina. [6]
 - c) Consider a unidirectional reinforced glass fiber/epoxy composite. The fibers are continuous and 60% by volume. The tensile strength of glass fibers is 1 GPa and the Young's modulus is 70 GPa. The tensile strength of the epoxy matrix is 60 MPa and its Young's modulus is 3 GPa. Compute the tensile strength of the composite in the longitudinal direction. [5]
- Q5) a) Explain double-cantilever beam test method for measurement of fracture toughness of composite. [6]
 - b) Describe tensile testing of unidirectional composites according to ASTM standard. [6]
 - c) Explain inter-laminar shear strength of composite material in detail. [6] OR
- Q6) a) What is the significance of bond strength and adhesion in composite?
 Explain in detail ASTM F904 for comparison of bond strength or ply adhesion.
 - b) Describe shear testing of unidirectional composites according to ASTM standard. [6]
 - c) What are test standards used in composite materials'? State any six test standards.
 [6]
- Q7) a) Explain Multimaterial concept used in automobile industry with example?[6]
 - b) List and describe the applications of composite for marine applications?[6]
 - c) Write a short note: Eco-friendly prime mover.

OR

- *Q8*) a) Write down various applications of composite material in the Aerospace sector and explain use of composite in manufacturing light combat aircraft (LCA) and Light Combat Helicopter LCH? [6]
 - b) Justify the use of Composites in sports equipment and discuss any two applications of composites used for protection of players. [6]
 - c) Elaborate on the applications of Composite for the Transportation Sector.
